

NOURBIA FOODS™

E-Commerce Website & Digital Commerce Platform

Developer Requirements, Functional Scope & Technical Direction

1. PROJECT OVERVIEW

Nourbia Foods is building a modern, mobile-first e-commerce experience designed to make culturally familiar, nutritious, convenient, and shelf-stable foods accessible to customers throughout the United States.

Nourbia Foods will sell its own products directly to consumers.

This is NOT a marketplace.

Outside businesses and individuals will not create their own stores or sell directly through the platform.

The platform's primary purpose is:

Customers discover culturally familiar foods, select individual products or curated Nourbia Food Boxes, choose home delivery or eligible local pickup, pay online or with a Nourbia Code, and receive their food with appropriate customer support.

Nourbia Foods will initially serve customers across **all 50 U.S. states**.

The platform should also be designed so Nourbia can expand internationally in the future without having to rebuild the entire system.

2. CORE BUSINESS MODEL

The website should support four primary purchasing experiences:

1. Individual Product Purchase

Customers browse products and select individual items.

2. Curated Nourbia Food Boxes

Customers can purchase pre-prepared boxes designed for individuals, families, or multiple families.

3. Home Delivery

Customers can order products for delivery to their address anywhere in the 50 United States.

4. Local Grocery/Supermarket Pickup

Nourbia will partner with local supermarkets and grocery stores to provide convenient local pickup where available.

Customers should be able to determine whether pickup is available in their area.

3. CULTURAL FOOD DISCOVERY

A central part of Nourbia's customer experience is helping customers find foods associated with their culture, heritage, and culinary traditions.

Customers should be able to discover products based on cultural or regional preferences.

Initial cultural categories may include:

- Haitian / Caribbean
- Latin American
- African
- West African
- Central African
- East African
- South African
- Other Caribbean cultures
- Other cultural communities as Nourbia expands

The system must allow Nourbia to add additional cultures and regions without requiring a developer.

Products can be associated with one or multiple cultural categories.

For example:

Haitian Foods

Haitian Spices

Caribbean Foods

West African Foods

Latin American Foods

The customer experience should make it easy for someone to answer:

“What foods from my culture can I find at Nourbia?”

4. WEBSITE STRUCTURE

The initial website should include, at minimum:

Homepage

The homepage should clearly communicate:

- What Nourbia Foods is
- What Nourbia sells
- Cultural food discovery
- Individual products
- Nourbia Food Boxes
- Home delivery
- Local grocery pickup
- Nourbia Code payment option
- Customer support

Shop

Customers can browse all products.

Cultural Foods

Customers can browse products by culture or region.

Food Boxes

Customers can view and purchase curated Nourbia Food Boxes.

Product Pages

Detailed information about each product.

Cart

Shopping cart and order summary.

Checkout

Customer information, delivery/pickup, payment, and final order confirmation.

Order Confirmation

Confirmation and next steps.

Customer Account

Optional account functionality.

About Nourbia

Brand story and mission.

Contact / Customer Support

Customer support information and communication options.

FAQ

Frequently asked questions.

Policies

Including:

- Shipping policy
 - Return/refund policy
 - Privacy policy
 - Terms of service
 - Food/product policies
 - Pickup policies
-

5. PRODUCT CATALOG

The website must include a product catalog that Nourbia administrators can manage without requiring a developer for routine changes.

Each product should support:

- Product name
- Product description
- Product photographs
- Product category
- Cultural/region association
- Product size
- Product weight
- Price

- Sale price
- Ingredients
- Nutrition information
- Allergen information
- Country/region of origin
- SKU
- Inventory quantity
- Product variations
- Shipping information
- Product status
- Availability
- Featured product designation

Product status should include:

- Active
 - Draft
 - Out of Stock
 - Discontinued
-

6. PRODUCT CATEGORIES

The system should support categories such as:

- Freeze-Dried Fruits
- Freeze-Dried Vegetables
- Freeze-Dried Fish
- Haitian Spices
- Haitian Foods
- Caribbean Foods
- African Foods
- Latin American Foods
- Nourbia Nutrition Products
- Family Food Boxes
- Other categories as Nourbia expands

Nourbia must be able to create new categories through the administrative system.

7. NOURBIA FOOD BOXES

Customers should be able to purchase individual products OR pre-prepared Nourbia Food Boxes.

The initial box structure should include:

A. Single Customer Box

Designed for one individual.

The product page should clearly show:

- Everything included
 - Product quantities
 - Product sizes
 - Price
 - Cultural/food category
 - Serving information where applicable
-

B. Medium Family Box

Designed for a medium-sized family.

The product page should clearly describe:

- Every product included
 - Quantity of each product
 - Product sizes
 - Price
 - Intended family use
-

C. Multi-Family Box

Designed for larger families, extended families, multiple households, community groups, or similar needs.

The product page should clearly describe:

- Products included
- Quantities
- Sizes
- Price
- Intended use

8. CULTURALLY SPECIFIC FOOD BOXES

Nourbia should be able to create culturally specific boxes.

Examples:

- Haitian Family Box
- Haitian Single Customer Box
- Haitian Multi-Family Box
- West African Family Box
- Caribbean Family Box
- Latin American Family Box

Additional boxes should be easily added as Nourbia expands.

Nourbia administrators should be able to modify box contents, pricing, descriptions, photographs, and availability without developer assistance.

Customers must be able to see exactly what is included in a box before purchasing.

9. SHOPPING CART

Customers must be able to combine individual products and food boxes in one shopping cart.

Example:

A customer can purchase:

- 1 Haitian Family Box
- 2 Haitian spice products
- 1 freeze-dried fruit product

All products should appear in the same order.

The cart should display:

- Product
- Quantity
- Unit price
- Subtotal
- Shipping
- Taxes

- Discounts
- Total

Customers should be able to:

- Add items
 - Remove items
 - Change quantities
 - Continue shopping
 - Proceed to checkout
-

10. CUSTOMER CHECKOUT

Checkout should be simple and optimized for mobile.

Customers should provide:

Customer Information

- First name
- Last name
- Email
- Phone number
- Preferred language

Delivery Information

- Street address
- Apartment/unit
- City
- State
- ZIP code
- Country

The system should validate addresses where possible.

Before submitting the order, the customer should see:

- Products
- Quantities
- Price
- Shipping
- Taxes
- Discounts
- Total

- Delivery/pickup method
 - Payment method
-

11. HOME DELIVERY — ALL 50 STATES

Nourbia Foods will offer home delivery throughout the **50 United States**.

The platform should support:

- U.S. address validation
- Shipping rate calculation
- Shipping method selection
- Estimated delivery information
- Shipping label creation
- Tracking
- Order fulfillment
- Delivery notifications

Potential shipping integrations include:

- USPS
- UPS
- FedEx
- ShipStation
- Other appropriate shipping/fulfillment platforms

The developer should recommend the most appropriate solution.

12. LOCAL SUPERMARKET & GROCERY STORE PICKUP

Nourbia Foods will partner with local supermarkets and grocery stores to provide local pickup where available.

Customers should be able to enter their ZIP code and determine whether a Nourbia partner location is available nearby.

Where available, customers should be able to:

1. Enter ZIP code/location.
2. View participating Nourbia partner stores.

3. Select a store.
4. View products available for pickup.
5. Select products or eligible Nourbia Food Boxes.
6. Select pickup.
7. Pay online or use a Nourbia Code.
8. Receive confirmation.
9. Receive notification when the order is ready.
10. Pick up the order from the selected location.

The system must clearly distinguish between:

Home Delivery

and

Local Store Pickup

The developer should recommend the best technical solution for managing inventory and orders across multiple grocery locations.

The system should be designed to accommodate additional partner locations as Nourbia grows.

13. PAYMENT OPTIONS

The website should support multiple payment options.

Online Payments

Customers should be able to pay with:

- Credit cards
- Debit cards
- Apple Pay
- Google Pay
- PayPal
- Other appropriate digital payment options

The developer should recommend the best payment provider and explain why.

Payment processing should use established secure third-party infrastructure whenever possible.

Nourbia should not store full credit-card information on its own servers.

14. NOURBIA CODE — PAYMENT WITHOUT A CARD

One of Nourbia's unique requirements is the ability for customers who do not have traditional payment cards to purchase products.

Nourbia will issue customers or authorized partners a **Nourbia Purchase Code**.

Customers should be able to use these codes at checkout.

Customer Experience

The customer:

1. Visits Nourbia.
2. Browses products.
3. Selects individual products or a Food Box.
4. Adds products to the cart.
5. Selects **Pay with Nourbia Code**.
6. Enters their code.
7. The system verifies the code.
8. The system confirms available balance.
9. The customer provides delivery or pickup information.
10. The order is submitted.
11. The code balance is reduced by the purchase amount.
12. The customer receives confirmation.

15. NOURBIA CODE MANAGEMENT

Nourbia administrators should be able to:

- Generate individual codes
- Generate codes in batches
- Assign monetary values
- Set expiration dates
- Activate codes
- Deactivate codes
- View remaining balances
- View transactions
- View date/time of use
- View associated orders

- Issue adjustments
- Process authorized refunds
- Prevent unauthorized reuse

The system must securely generate codes and prevent guessing, duplication, or replay.

Every code transaction should be recorded.

The developer should recommend whether this functionality should be built as a secure custom component within the selected e-commerce platform or through an appropriate existing gift-card/store-credit infrastructure.

This should be treated as a key custom requirement and should be prototyped before full development.

16. MULTILINGUAL CUSTOMER EXPERIENCE

Nourbia will serve culturally diverse customers.

The system should capture each customer's preferred language.

Initial language support may include:

- English
- Haitian Creole
- French
- Spanish
- Portuguese

Additional languages should be possible in the future.

The customer's preferred language should be associated with their customer/order record.

17. NOURBIA GLOBAL CALL CENTER NETWORK

Nourbia will operate a distributed customer-service network with call centers located in:

- Philippines
- South Africa
- Nigeria
- Congo-Brazzaville
- Latin America

- Caribbean

These teams will support Nourbia customers and assist with order communication.

When appropriate, call-center personnel should be able to:

- Review orders
 - Confirm orders
 - Contact customers
 - Confirm addresses
 - Confirm delivery information
 - Confirm pickup information
 - Explain order status
 - Address customer questions
 - Resolve payment/code issues
 - Assist with substitutions when authorized
 - Provide customer service in the customer's language
-

18. CALL CENTER ORDER NOTIFICATION

When an order is received, the appropriate Nourbia call-center team should be able to access the order information required for customer support.

The call center may contact customers through:

- Phone
- SMS/text
- Email
- Other approved communication channels

The customer may receive a message such as:

"Your Nourbia order has been received and is being prepared."

or:

"Your Nourbia order is ready for pickup."

The communication system should allow Nourbia to maintain a history of relevant customer communications.

19. CALL CENTER ROLE-BASED ACCESS

The system must use role-based permissions.

Nourbia Administrator

May have access to:

- Products
- Pricing
- Inventory
- Orders
- Customers
- Nourbia Codes
- Promotions
- Reports
- Website content
- Fulfillment

Call Center Agent

Should have access only to information necessary to support customers, such as:

- Customer name
- Phone
- Email
- Preferred language
- Order number
- Products ordered
- Order status
- Delivery/pickup information
- Customer notes
- Approved communication history

Call-center personnel should not automatically have access to sensitive financial or administrative information.

20. ORDER MANAGEMENT

Nourbia administrators should have a complete order management system.

Each order should contain:

- Order number
- Customer name
- Phone
- Email
- Preferred language
- Shipping address
- Pickup location, if applicable
- Products
- Quantities
- Food Box
- Payment method
- Payment status
- Order value
- Order status
- Shipping status
- Tracking number
- Customer notes

Order statuses should include:

- Pending
- Payment Pending
- Paid
- Code Verified
- Processing
- Ready to Ship
- Shipped
- Delivered
- Ready for Pickup
- Picked Up
- Cancelled
- Refunded

21. CUSTOMER ACCOUNTS

Customers should have the option to create an account.

Customer accounts should allow:

- Order history
- Order tracking

- Saved addresses
- Personal information
- Reordering
- Communication preferences
- Preferred language
- Nourbia Code balance where applicable

However:

Guest checkout must be available.

Customers should not be forced to create an account to purchase.

22. CUSTOMER NOTIFICATIONS

Customers should receive automated notifications for important events.

Notifications may include:

- Order confirmation
- Payment confirmation
- Nourbia Code confirmation
- Order processing
- Order ready for pickup
- Order shipped
- Tracking information
- Delivery confirmation
- Cancellation
- Refund

Communication channels should include:

- Email
- SMS/text
- Phone support

The developer should recommend the appropriate communications platform.

23. INTEGRATION STRATEGY

Nourbia does not want to build every technology component from scratch.

The preferred strategy is:

Use proven e-commerce infrastructure and third-party integrations wherever possible, while custom-building only the functionality that makes Nourbia unique.

The developer should evaluate Shopify or an equivalent established e-commerce platform.

24. RECOMMENDED INTEGRATION CATEGORIES

E-Commerce Platform

Potential primary platform:

Shopify

The developer should confirm whether Shopify can support the complete Nourbia requirements.

Alternative established platforms may be considered if technically superior.

Payment

Potential integrations:

- Stripe
 - PayPal
 - Apple Pay
 - Google Pay
-

Shipping

Potential integrations:

- USPS
 - UPS
 - FedEx
 - ShipStation
-

SMS / Communications

Potential integrations:

- Twilio
- Other enterprise-grade communication platforms

The system should support Nourbia's multilingual call-center model.

Email Marketing / CRM

Potential integrations:

- Klaviyo
 - Mailchimp
 - Other appropriate CRM/email platform
-

Analytics

Potential integrations:

- Google Analytics
 - Google Tag Manager
 - Meta Pixel
 - Other appropriate analytics tools
-

Accounting

Potential integrations:

- QuickBooks
 - Xero
 - Other appropriate accounting platforms
-

Inventory

The system should be capable of integrating with an inventory-management platform as Nourbia grows.

Grocery Partner Integration

The developer should investigate the best solution for:

- Partner grocery stores
 - Local inventory
 - Pickup availability
 - Pickup orders
 - Store-level fulfillment
 - Order status
 - Inventory synchronization
-

25. TECHNICAL ARCHITECTURE REQUIREMENT

Before development begins, the developer should provide Nourbia with a proposed technical architecture.

The architecture should show how the following components communicate:

Customer Website

↓

E-Commerce Platform

↓

Payment System

↓

Nourbia Code System

↓

Order Management

↓

Inventory

↓

Shipping / Grocery Pickup

↓

Call Center / CRM

↓

SMS / Email

↓

Analytics / Accounting

The developer should clearly identify:

- Native platform functionality
 - Third-party integrations
 - Custom development
 - Data flow
 - Security controls
 - User permissions
 - Future scalability
-

26. MOBILE-FIRST DESIGN

The website must be fully responsive.

Customers should be able to complete the entire purchase process from:

- iPhone
- Android
- Tablet
- Desktop

The mobile checkout experience is especially important.

The complete process should work smoothly on a smartphone:

Browse → Select → Cart → Delivery/Pickup → Payment/Code → Confirmation

27. SEARCH & PRODUCT DISCOVERY

Customers should be able to search and filter products.

Search functionality should support:

- Product name
- Cultural category
- Country/region

- Food category
- Product type
- Dietary preferences where applicable
- Price
- Availability

The website should also support:

- Featured products
 - Best sellers
 - New products
 - Related products
 - Recommended products
 - Food Boxes
-

28. PROMOTIONS & DISCOUNTS

The system should support:

- Discount codes
- Percentage discounts
- Fixed-dollar discounts
- Product-specific promotions
- Food Box promotions
- Free shipping promotions
- Seasonal promotions
- Customer-specific promotions

Nourbia administrators should be able to manage promotions without developer assistance.

29. ANALYTICS & REPORTING

Nourbia should have access to meaningful business data.

The system should track:

- Total sales
- Number of orders
- Average order value
- Best-selling products

- Best-selling Food Boxes
- Sales by state
- Sales by cultural category
- Home delivery orders
- Local pickup orders
- Online payment orders
- Nourbia Code orders
- Inventory
- Abandoned carts
- Discount usage
- New customers
- Repeat customers

Reports should be exportable.

30. SECURITY & PRIVACY

Security must be treated as a core requirement.

The platform should include:

- SSL/HTTPS
- Secure payment processing
- PCI-compliant payment processing
- Secure customer information
- Role-based access
- Strong administrator authentication
- Two-factor authentication where available
- Secure Nourbia Code infrastructure
- Fraud prevention
- Backups
- Audit/activity logs

Nourbia should not store full payment-card information.

Customer information should only be accessible to employees or authorized partners who require it to perform their responsibilities.

31. ADMINISTRATION DASHBOARD

Nourbia must have an easy-to-use backend.

Authorized Nourbia employees should be able to manage:

Products

- Add
- Edit
- Remove
- Change price
- Upload photographs
- Update inventory
- Change availability

Food Boxes

- Create
- Edit
- Change contents
- Change pricing
- Change availability

Orders

- View
- Process
- Update status
- Add tracking
- Cancel
- Refund

Customers

- View
- Manage
- View order history

Nourbia Codes

- Generate
- Manage
- Activate/deactivate
- Track
- View transactions

Promotions

- Create
- Edit
- Activate/deactivate

Website Content

- Homepage
- Product categories
- Banners
- FAQs
- Policies
- Contact information

Routine business management should not require developer involvement.

32. SCALABILITY

The initial project should be an MVP, but the technical foundation should allow Nourbia to grow.

Potential future capabilities include:

- Subscription Food Boxes
- Recurring orders
- Loyalty/rewards program
- Referral program
- Wholesale/B2B ordering
- International shipping
- Multiple currencies
- Mobile application
- Additional cultural categories
- Additional grocery partners
- Advanced inventory management
- AI-powered product recommendations
- Personalized food recommendations
- Expanded multilingual support

These features do not need to be built in the initial phase unless specifically approved.

34. DEVELOPER RECOMMENDATION & DISCOVERY PHASE

Before development begins, the developer should conduct a technical discovery phase and provide Nourbia with:

1. Platform Recommendation

Explain why Shopify or another platform is the best choice.

2. Integration Map

Show how all systems will communicate.

3. Nourbia Code Prototype

Demonstrate how the code-based purchasing system will work.

4. Grocery Pickup Architecture

Explain how partner stores, inventory, and pickup orders will be managed.

5. Call Center Architecture

Explain how international call-center personnel will access and manage customer/order information securely.

6. Multilingual Strategy

Explain how language preferences and multilingual customer communications will work.

7. Security Plan

Explain how customer information, payments, administrative access, and Nourbia Codes will be protected.

8. Scalability Plan

Explain how the system can grow from the initial MVP to a larger national and eventually international operation.

35. DEVELOPMENT PRINCIPLE

Nourbia does **not** want unnecessary custom technology.

The development team should follow this principle:

Use established, reliable technology for standard e-commerce functions and reserve custom development for Nourbia's unique business requirements.

Standard functionality should preferably be handled through proven platforms and integrations for:

- E-commerce
- Checkout
- Payments
- Shipping
- Email
- Analytics
- Tax
- Security
- Inventory

Custom development should focus primarily on:

- Nourbia Code
 - Cultural food discovery where necessary
 - Grocery partner pickup workflows
 - Call-center workflows
 - Nourbia-specific business rules
 - Custom integrations that cannot reasonably be handled through existing tools
-

36. FINAL PROJECT OUTCOME

The completed Nourbia Foods digital commerce platform should allow a customer to:

Find food associated with their culture → choose individual products or a prepared Nourbia Food Box → see exactly what they are purchasing → choose home delivery or local grocery pickup → enter their address → pay online or use a Nourbia Code → receive confirmation → receive multilingual customer support → receive their food.

At the same time, Nourbia should have the infrastructure to manage:

- Products
- Food Boxes
- Pricing
- Inventory
- Orders
- Customers
- Nourbia Codes
- Shipping
- Grocery pickup
- Promotions
- Customer communications
- Call-center operations
- Analytics

The system should be **simple for customers, simple for Nourbia employees, secure, mobile-first, scalable, and integration-friendly.**

Core principle:

Nourbia is building a customer-first food commerce platform — not a marketplace.

The technology should support Nourbia's mission without creating unnecessary complexity.
